1. Introduction

Service Manager is an electric-tool repair management application designed specifically for the BUSINESSWARE M LTD workshop. It covers the complete repair lifecycle, from device intake to customer handover.

The application is optimised for the MEFERI ME61 Android handheld terminal but works equally well on any Android phone or tablet.

Key Features

- Full ticket lifecycle with 6 statuses: Received, Diagnosis, Repair, Awaiting Parts, Ready, Delivered
 - Parts and labour tracking per ticket
 - Barcode and QR code scanning for instant ticket lookup
 - 60x40mm label printing on TSC MB241T printer via WiFi
 - Automatic customer notifications via SMS (Twilio) and Email (SMTP)
 - Public repair status page — no login required for customers
 - Analytics dashboard with revenue, repair time and status breakdown
 - PIN-based login with separate Manager and Technician roles
-

2. Installation

The app is installed as an APK (Android Package) file. No Google Play Store is required.

Installation Steps

1. Open the browser (Chrome) on your Android device.
2. Navigate to the download link provided to you.
3. Tap Download. The APK file will download automatically.
4. Open the file from your Downloads folder. If prompted for Unknown Sources permission, grant it.
5. Tap Install and wait for the process to complete.
6. Open Service Manager from the home screen.

Requirement: Android 10 or later. The device must be connected to the local network or the internet to communicate with the server.

3. Login

The app uses a 4-digit PIN to identify each technician. Every technician has their own unique PIN.

Role	PIN	Access
Manager	9999	Full access: settings, technicians, analytics, tickets
Technician	1234	Tickets, scanning, inventory — no settings access
General Tech	2345	Tickets, scanning, inventory — no settings access

PINs are changed by a Manager via: Settings > Technicians > pencil (edit) icon.

4. Main Screen

The main screen (Tickets tab) displays all open tickets and provides quick navigation to all features.

Status Chips — Quick Filter

- All: shows every ticket regardless of status
- Received, Diagnosis, Repair, Awaiting, Ready, Delivered: filter by status
- The number next to each status shows how many tickets are currently in that state

Ticket Card

- Ticket code (SRV-YYYYMMDD-XXXX)
- Customer name and phone number
- Device brand and model
- Status with colour indicator
- Date received

Search

Type a customer name or ticket code in the search bar to quickly locate a ticket.

5. Creating a New Ticket

Tap the + button at the top right of the main screen to create a new repair ticket.

Ticket Fields

- Customer Name (required)
- Customer Phone (required — used for SMS notifications)
- Customer Email (optional — for email notifications)
- Device Brand (required)
- Device Model (required)
- Problem Description (required)
- Assign to Technician (optional)
- Estimated Completion Date (optional)

Once the ticket is saved, 2 labels print automatically: one device label for the technician and one receipt for the customer, provided the printer is configured in Settings.

6. Ticket Details & Statuses

Tap any ticket to view full details, change its status, or add parts and labour.

Ticket Lifecycle

Status	Description
Received	Device accepted — initial status
Diagnosis	Technician is examining the device
Repair	Repair is in progress
Awaiting Parts	Waiting for ordered parts to arrive
Ready	Repair complete — customer is notified automatically
Delivered	Device returned to the customer

Available Actions

- Change status with a single tap
 - Add parts and labour
 - Scan a part barcode to add it instantly
 - Send SMS or Email to the customer
 - Reprint device label or customer receipt
 - Show QR code link to the public status page
-

7. Barcode / QR Scanning

The app supports scanning via the Scan tab to open a ticket, or from within a ticket to add parts. The MEFERI ME61 has a built-in barcode scanner.

Opening a Ticket by Scanning

1. Tap the Scan tab at the bottom of the screen.
2. Scan the barcode or QR code on the device label.
3. The app opens the corresponding ticket automatically.
4. Alternatively, type the ticket code manually in the text field.

8. Label Printing (TSC MB241T)

The TSC MB241T printer connects via WiFi (TCP/IP) and uses a 60x40mm label roll. Every ticket prints 2 labels automatically:

Device Label (for the technician)

- Ticket code (large text)
- Customer name and device
- Problem description (up to 2 lines)
- Date received
- QR code: scan to open the ticket in the app
- Code128 barcode for use with a barcode scanner or gun

Customer Receipt (for the customer)

- Shop name and phone
- Ticket code (prominent display)
- Customer name and phone
- Device and date received
- QR code: customer scans to view repair status online

Printer setup: Settings > Label Printer (TSC MB241T) > enter the IP address and Port (default: 9100).

9. Analytics

The Analytics tab shows performance metrics for 3 time periods: 7 Days, 30 Days, 12 Months.

Metric	Description
Total Revenue	Sum of parts and labour costs in EUR
Total Jobs	Number of tickets in the selected period
Completed	Tickets marked as Delivered to the customer
Avg Repair Time	Average time from Received to Delivered in hours
Revenue Trend	Daily revenue bar chart for the period
Status Breakdown	Number of tickets in each status

10. Settings

Accessible by Manager only. Navigate to the Settings tab and save changes with the Save Settings button.

Billing

- Hourly Rate (EUR): default labour rate per hour
- VAT Rate (%): VAT percentage applied to invoices

Shop Information

- Shop name: printed on the customer receipt label
- Shop phone number

Label Printer — TSC MB241T

- Printer IP address, e.g. 192.168.1.100
- Printer Port (default: 9100)

SMS Notifications — Twilio

- Account SID: from the Twilio dashboard
- Auth Token: secret Twilio key
- From Number: the number messages are sent from

Email Notifications — SMTP

- SMTP Host and Port
 - Username and Password
 - From Email address
-

11. Technician Management

Navigate to: Settings > Manage Technicians. Available to Manager role only.

Adding a New Technician

1. Tap the + button at the top right of the screen.
2. Fill in the Full Name, 4-digit PIN and Role (Technician or Manager).
3. Tap Create to save.

Editing a Technician

1. Tap the pencil icon on the row of the technician you want to edit.
2. Change Name, PIN (leave blank to keep the current PIN) or Role.
3. Tap Save.

Deactivating a Technician

Tap the bin icon on the technician's row and confirm in the dialog box. The technician is deactivated and can no longer log in, but their full ticket history is preserved.

It is not possible to deactivate the last active Manager or to change their role to Technician if they are the only active Manager in the system.

12. Parts Inventory

Navigate to: Settings > Manage Parts Inventory. Manage the parts catalogue for your workshop.

- Add a part with code, description, barcode and price
 - Scan a part barcode directly from the ticket screen to add it instantly
 - Track parts cost per ticket
 - Parts costs are automatically included in Analytics revenue calculations
-

13. SMS & Email Notifications

The app sends automatic notifications to the customer when a ticket reaches the Ready status.

SMS via Twilio

1. Configure Twilio credentials in Settings (Account SID, Auth Token, From Number).
2. Ensure the ticket has a customer phone number.
3. SMS is sent automatically when the status changes to Ready.
4. You can also send an SMS manually at any time from the ticket screen.

Email via SMTP

1. Configure SMTP settings in Settings (Host, Port, Username, Password).
2. Ensure the ticket has a customer email address.
3. Email is sent automatically when the status changes to Ready.

The notification message includes a link and QR code to the public repair status page so customers can track the progress of their repair online.
