1. Introduction

Service Manager is an electric-tool repair management application designed specifically for the BUSINESSWARE M LTD workshop. It covers the complete repair lifecycle: from device intake to customer handover.

The application is optimised for the MEFERI ME61 Android handheld terminal but works equally well on any Android phone or tablet.

Key Features

- Full ticket lifecycle: 6 statuses (Received → Diagnosis → Repair → Awaiting Parts → Ready → Delivered)
- Parts and labour tracking per ticket
- Barcode / QR scanning for instant ticket lookup
- 60×40mm label printing on TSC MB241T (WiFi)
- Automatic customer notifications via SMS (Twilio) and Email (SMTP)
- Public repair status page (no login required)
- Analytics dashboard (revenue, repair time, status breakdown)
- PIN-based login — separate Manager / Technician roles

2. Installation

The app is installed as an APK (Android Package) — no Google Play Store required.

Installation Steps

Step 1: Open the browser (Chrome) on your Android device.

Step 2: Navigate to the download link provided to you.

Step 3: Tap 'Download' — the APK file will download automatically.

Step 4: Open the file from Downloads. If prompted for 'Unknown Sources' permission, grant it.

Step 5: Tap 'Install' and wait for the process to complete.

Step 6: Open 'Service Manager' from the home screen.

Requirement: Android 10 or later. The device must be connected to the local network or the internet to communicate with the server.

3. Login

The app uses a 4-digit PIN to identify each technician. Every technician has their own PIN.

Role	PIN	Access
Manager	9999	Full access: settings, technicians, analytics, tickets
Technician	1234	Tickets, scanning, inventory — no settings
General Tech	2345	Tickets, scanning, inventory — no settings

PINs are changed by a Manager via Settings → Technicians → Edit (pencil icon).

4. Main Screen

The main screen (Tickets tab) displays all open tickets and provides quick navigation.

Status Chips (quick filter)

- All — shows every ticket
- Received, Diagnosis, Repair, Awaiting, Ready, Delivered — filter by status
- The number next to each status shows how many tickets are in that state

Ticket Card

- Ticket code (SRV-YYYYMMDD-XXXX)
- Customer name & phone number
- Device (brand & model)
- Status with colour indicator
- Date received

Search

Type a customer name or ticket code in the search bar to quickly locate a ticket.

5. Creating a New Ticket

Tap the '+' button at the top right of the main screen to create a new ticket.

Required Fields

- Customer Name *
- Customer Phone * (used for SMS notifications)
- Customer Email (optional — for email notifications)
- Device Brand *
- Device Model *
- Problem Description *
- Assign to Technician (optional)
- Estimated Completion Date (optional)

Once the ticket is saved, 2 labels are printed automatically: one for the device and one receipt for the customer (if the printer is configured).

6. Ticket Details & Statuses

Tap any ticket to view full details and change its status.

Ticket Lifecycle

Status	Description
Received	Device accepted — initial status
Diagnosis	Technician is examining the device
Repair	Repair is in progress
Awaiting Parts	Waiting for parts to arrive
Ready	Repair complete — customer is notified automatically
Delivered	Device returned to the customer

Actions from the Ticket Screen

- Change status with a single tap
- Add parts / labour
- Scan a part barcode
- Send SMS or Email to the customer
- Reprint labels
- Show QR code for the public status page

7. Barcode / QR Scanning

The app supports scanning from the 'Scan' tab or from within a ticket to add parts. The MEFERI ME61 has a built-in barcode scanner.

How to Scan a Ticket

1. Tap the 'Scan' tab at the bottom of the screen.
2. Scan the barcode or QR code on the device label.
3. The app opens the corresponding ticket automatically.
4. Alternatively, type the ticket code manually.

8. Label Printing (TSC MB241T)

The TSC MB241T printer connects via WiFi (TCP/IP). It uses a 60×40mm label roll. Every ticket prints 2 labels automatically:

Device Label (for the technician)

- Ticket code (large text)
- Customer name & device
- Problem description (up to 2 lines)
- Date received
- QR code — technician scans to open the ticket
- Code128 barcode (for barcode gun / scanner)

Customer Receipt (for the customer)

- Shop name & phone
- Ticket code (prominent)
- Customer name & phone
- Device & date
- QR code — customer scans to view repair status online

Printer setup: Settings → Label Printer (TSC MB241T) → enter IP and Port (default: 9100).

9. Analytics

The Analytics tab shows performance metrics for 3 periods: 7 Days, 30 Days, 12 Months.

Metric	Description
Total Revenue	Sum of parts + labour (EUR)
Total Jobs	Number of tickets in the selected period
Completed	Tickets marked as Delivered
Avg Repair Time	Average time from Received to Delivered (hours)
Revenue Trend	Daily revenue bar chart
Status Breakdown	How many tickets are in each status

10. Settings

Accessible by Manager only. Settings → save with the 'Save Settings' button.

Billing

- Hourly Rate (EUR) — default labour rate
- VAT Rate (%) — VAT percentage

Shop Information

- Shop name — printed on customer receipt
- Shop phone number

Label Printer (TSC MB241T)

- Printer IP — e.g. 192.168.1.100
- Printer Port — default: 9100

SMS Notifications (Twilio)

- Account SID — from Twilio dashboard
- Auth Token — secret Twilio key
- From Number — the number messages are sent from

Email Notifications (SMTP)

- SMTP Host, Port
- Username & Password
- From Email address

11. Technician Management

Access: Settings → Manage Technicians (Manager only).

Adding a New Technician

- Tap the '+' button at the top right.
- Fill in the Full Name, 4-digit PIN and Role.
- Tap 'Create'.

Editing a Technician (change role / PIN)

- Tap the ⇌ icon on the technician's row.
- Change Name, PIN (leave blank to keep unchanged) or Role.
- Tap 'Save'.

Deactivating a Technician

Tap the ☐ icon on the technician's row and confirm in the dialog. The technician is deactivated (cannot log in), but their ticket history is preserved.

It is not possible to deactivate the last active Manager or to demote them to Technician if they are the only Manager.

12. Parts Inventory

Access: Settings → Manage Parts Inventory. Manage your parts catalogue.

- Add a part with code, description, barcode and price
- Scan a part barcode from the ticket screen
- Track parts cost per ticket
- Parts are included in Analytics revenue calculations

13. SMS & Email Notifications

The app sends automatic notifications to the customer when a ticket reaches the 'Ready' status.

SMS via Twilio

- Configure Twilio credentials in Settings.
- Ensure the ticket has a customer phone number.
- SMS is sent automatically when status changes to 'Ready'.
- You can also send manually from the ticket screen.

Email via SMTP

- Configure SMTP settings in Settings.
- Ensure the ticket has a customer email address.
- Email is sent automatically when status changes to 'Ready'.

The notification message includes a link / QR code to the public repair status page.
